Leaders of Tomorrow Program | 17-19 June 2020

At SingularityU we know that the future will be very different from the past. Exponential technologies permeate all of our businesses, societies and even personal lives. In this age of accelerating change, we need leaders that understand this new wave of technologies, are adaptive enough to identify both threats and challenges this change poses and make sure we use these technologies and change to impact our people and planet in the right way. If we want an adaptive leadership in and for the future, we need to create those pioneers today. That's why SingularityU Benelux and Social Enterprise NL are co-creating a Leaders of Tomorrow Program, intended for social intrapreneurs, young radical change makers who will become purpose-driven leaders of the future.

"Are you that young game changer we are looking for?"

The Leaders of Tomorrow Program is an exclusive 2,5-day immersive program aimed at young gamechangers and purpose-driven young professionals, those that want to create real impact within their organizations, who intend to address humanity's grand challenges and create a positive impact in the world. During the program you will get the best of both SingularityU faculty members and the expertise from social entrepreneurs from the curated network of Social Enterprise NL. Meet and interact with fellow gamechangers, learn from the exponential world of Singularity University and see how real change and impact is occurring by listening to founders and MD's of social enterprises.

incl. accommodation and food experiences during the 2,5-day program

€ 4.000,- (excluding VAT)

Day 0.
A New Beginning.

On the first eve of the program you will meet your fellow participants and learn about the different frameworks that the program will apply.

We believe that leveraging the convergence of technologies will help us solve the world's biggest challenges. But how do you define technology and how do you start to put these technologies to good use to impact a billion people in a positive way? Day 0 of the program is all about setting you up in the right way for you to be able to start answering these questions yourself.

Day 1.
Reframing your perspective.

What are new converging technologies, why are they relevant for us? How can we be equipped to deal with the changes that exponential technologies bring? And what are the world's largest challenges, and how can you help solve them by applying these exponential technologies?

Get familiar with social entrepreneurship and the key drivers of exponential change, such as Moore's Law, the Law of Accelerating Returns, the 6D's and discover the Global Grand Challenges. Shift your mindset from linear to exponential and discover how exponential technologies, such as Robotics, Health and Biotech, can impact us and solve humanity's biggest challenges.

Day 2.
Planning your future.

What exponential technologies can help you in your endeavors? How can you take the lead in an exponential world?

Identify key technologies that can be leveraged inside your organization. Learn about social entrepreneurship, discuss ethics and gain insights into what exponential technologies mean for our current structures, businesses, lives and society as a whole. Discover new tools and skills to translate your new knowledge into action. Take your first step into becoming an exponential leader.

Who is the Leaders of Tomorrow Program for?

· Young radical change makers who are eager to make real impact and change within their organization and personal environment.
· With at least 5 years work experience.
· Young professionals between 27 and 37 years old.
· We welcome participants from diverse backgrounds from corporates, government and NGO's.

"I would really recommend any young professional to attend this program, as it helps you to become aware of technologies and the need for change."

- Young professional KPMG

Facts

1st Edition	**2,5** Days	**40** Participants	**8+** Speakers	**5+** Workshops

Why should you join?

· **Learn about the power of social entrepreneurship as a method to address the world's Global Grand Challenges.**

· **Learn about the current state of the art of exponential technologies.** Your view of what the future holds will permanently shift after your exposure to exponential technologies. Instead of fearing the future, you'll start to see how technology can unlock solutions that will change the world and your future.

· **Discover new tools and skills to translate your new knowledge into action.** Tools for integrating these concepts and nimble innovation into your organization are at the core of the program: lean startup processes, DIY tools, rapid prototyping, the maker movement, future forecasting, change management, and open source approaches to innovation.

· **Become inspired by examples of how people are using exponential technology to solve Global Grand Challenges.** Domain experts and renowned speakers will share case-studies about businesses that already set an example.

· **Develop a step-by-step action plan to scale your impact.** In a mixture of lectures, workshops, site-visits, informal evening discussions, pitch sessions, and free time in the innovation hub, you will radically shift your perspective of the future and your ability to leverage new technologies in a highly competitive world.
